Naturkatastrophen und Katastrophenvorbeugung (Natural Disasters and Disaster Reduction)

Report of the Scientific Advisory Board of the DFG for the German Committee for the International Decade for Natural Disaster Reduction (IDNDR)

Eds.: Erich Plate, Lars Clausen, Ulrich de Haar, Hans-Bernhard Kleeberg, Günter Klein, Georg Mattheß, Rainer Roth, and Hans-Ulrich Schmincke

VCH Verlagsgesellschaft mbH Weinheim, Germany, 1993
ISBN: 3-527-27028-0

I Contents

1	Contributions of the German Scientific Community to the International Decade for Natural Disaster Reduction (IDNDR) - Summarized Report	1
	<i>Erich Plate, Wolfgang Kron, and Sabine Seiert</i>	
1.1	Introduction	1
1.1.1	General	1
1.1.2	The International Decade for Natural Disaster Reduction	3
1.1.3	The working program of the Scientific Advisory Board	6
1.1.4	Abstract	7
1.1.4.1	Psychological and sociological aspects	8
1.1.4.2	Earthquakes	8
1.1.4.3	Volcanoes	9
1.1.4.4	Landslides	9
1.1.4.5	Floods and Droughts	10
1.1.4.6	Storms	10
1.2	Psychology	10
1.2.1	Situation in view of a natural hazard	11
1.2.2	Situation in view of the warning of an imminent disaster	11
1.2.3	Situation during a disaster	12
1.2.4	Situation after a disaster	12
1.2.5	Psychological research on risk and stress	12
1.2.6	Man as a cause of natural disasters	13
1.2.7	Research needs	14

1.3	Sociology of disaster	14
1.3.1	General outlook and most urgent needs of interdisciplinary communication	15
1.3.2	Sociological modeling	16
1.3.3	The macrosociological model FAKKEL	16
1.3.4	Effective disaster management from the viewpoint of sociology of disaster	19
1.3.5	Identification of regional disaster hazards	20
1.3.6	Quantification of risk potential	20
1.4	Earthquakes	21
1.4.1	Seismic focal and propagation processes	23
1.4.2	Aftershocks	24
1.4.3	Seismic hazard analysis	24
1.4.4	Soil-building interactions	25
1.4.5	Concrete and masonry buildings	26
1.4.6	Steel structures	28
1.4.7	Components and installations	29
1.4.8	Isolating mechanisms	29
1.4.9	Low-cost housing	33
1.4.10	Strengthening of buildings	34
1.4.11	Regulations and codes	35
1.4.12	Basic research on earthquakes	37
1.4.13	Pre- and post-disaster measures	38
1.4.14	Seminars and courses for training and education	39
1.4.15	Regional planning after earthquake disasters	39
1.5	Volcanoes	40
1.5.1	Location, morphology, and products of volcanoes	41
1.5.2	Types of dangerous volcanic activity	41
1.5.3	Prediction of volcanic eruptions	43
1.5.4	Prevention and mitigation of volcanic hazards	44
1.5.5	Recommendations of the International Association of Volcanology and Chemistry of the Earth's Interior (IAVCEI) for the IDNDR	45
1.6	Landslides	47
1.6.1	Definitions	47
1.6.2	Classification	47
1.6.2.1	Petrography and mechanics of landslides	47
1.6.2.2	Morphology of landslides	48
1.6.2.3	Special cases of landslides	48
1.6.3	Causes of landslides	49
1.6.4	Research needs	51
1.6.5	Procedures	54

1.7	Floods and droughts	54
1.7.1	Forms and causes of flood disasters	55
1.7.2	Quantification of risk potential	56
1.7.3	Reduction of risk potential	57
1.7.4	Prevention of disasters	58
1.7.5	Disaster management	58
1.7.6	Marine risk potential	59
1.7.6.1	Natural risks	59
1.7.6.2	Man-made risks	60
1.7.7	Droughts	60
1.7.8	Research needs	61
1.7.8.1	Floods	61
1.7.8.2	Marine systems	63
1.7.8.3	Droughts	63
1.8	Storms	64
1.8.1	Storm events in various wind climates	65
1.8.1.1	Barocline storms	65
1.8.1.2	Tropical cyclones	67
1.8.1.3	Convective storms and tornadoes	67
1.8.1.4	Orographic storms	68
1.8.2	Precipitation events in various climates	68
1.8.2.1	Rain	68
1.8.2.2	Hail	68
1.8.2.3	Snow	69
1.8.3	Joint occurrence of extremes of wind and precipitation	69
1.8.4	Research needs	70
2	Social sciences	73
	<i>Lars Clausen (Ed.)</i>	
2.1	Man as victim and cause of natural disasters: the contribution of environmental psychological research <i>Werner Ketterer and Hans Spada</i>	73
2.1.1	Introduction	73
2.1.2	Research with applied focuses	74
2.1.2.1	Situation in view of a natural hazard: human reactions to imminent dangers	74
2.1.2.2	Situation in view of the warning of an imminent disaster	77
2.1.2.3	Situation during a disaster	78
2.1.2.4	Situation after a disaster	80

2.1.3	Psychological basic research with implications for the prevention of natural disasters	82
2.1.3.1	Man as victim of natural disasters	82
2.1.3.2	Man as cause of natural disasters - psychological studies on man's treatment of nature	85
2.1.4	Focuses of German research	89
2.1.5	Research results and open issues: a summary	90
2.1.6	Literature	94
2.2	Sociology of disaster: an inventory <i>Frerk Möller and Lars Clausen</i>	108
2.2.1	The scope and urgency of an interdisciplinary approach	108
2.2.1.1	Terms and metaphors constructing reality	109
2.2.1.2	What ought to be done	110
2.2.2	Sociological modeling	111
2.2.2.1	The dimensions of social change	112
2.2.2.2	Some contributions of the Kiel Disaster Research Center (KFS) to the sociology of disaster	112
2.2.2.3	Doom disregarded	113
2.2.2.4	A model of macrosociological change: FAKKEL	113
2.2.2.4.1	Strategies of problem solving during disaster	114
2.2.2.4.2	Typical stages whilst disaster evolve	114
2.2.2.5	Microsociological modeling for practical use: the typical phases of LIDPAR	116
2.2.3	A specified outline of an effective disaster management, from a sociological viewpoint	118
2.2.3.1	Focusing on regional risks of disasters	119
2.2.3.1.1	The value of prognosis and epignosis for disaster research	121
2.2.3.1.2	The practice of warning - a theoretical approach	121
2.2.3.1.3	Emergency planning and civil defense in Germany	122
2.2.3.2	Measuring potential harm	123
2.2.3.2.1	What might be measured and insured?	124
2.2.3.2.2	If costs are shoved off - who is to pay?	124
2.2.3.2.3	Calculating synergistic risks?	125
2.2.3.3	Toward the diminution of potential harm and the best crisis management	125
2.2.4	Literature	126

3	Earthquakes	149
	<i>Günter Klein (Ed.)</i>	
	Foreword	149
3.1	Focal and propagation processes	151
	<i>Frank Scherbaum, Gotz Schneider and Horst Langer</i>	
3.1.1	Introduction	151
3.1.2	Seismic focal process	152
3.1.3	Propagation medium	153
3.1.4	Site effects	154
3.1.5	Simulation of ground motions	156
3.1.6	Open questions	161
3.1.7	Summary	162
3.1.8	Literature	162
3.2	Aftershocks	166
	<i>Frank Scherbaum</i>	
3.2.1	Introduction	166
3.2.2	Cause of aftershocks	167
3.2.3	Information content of aftershock series	168
3.2.4	Mobile instrumentation	171
3.2.5	Summary	173
3.2.6	Literature	173
3.3	Seismic risk analysis	177
	<i>Ludwig Ahorner and Werner Rosenhauer</i>	
3.3.1	Introduction	177
3.3.2	Analysis of seismicity	179
3.3.3	Site analysis	181
3.3.4	Probabilistic hazard maps	184
3.3.5	Open questions and conclusions	189
3.3.6	Literature	190
3.4	Interaction processes	191
	<i>Heinz Antes and Walter Rodatz</i>	
3.4.1	State of research	192
3.4.1.1	Computational methods	192
3.4.1.2	Experimental methods	194
3.4.1.3	Soil-structure interaction problems	194
3.4.1.4	Soil-structure-fluid interaction problems	197
3.4.2	Summary	199
3.4.3	Open questions and research needs	200
3.4.4	Literature	201

3.5	Concrete and masonry structures <i>Josef Eibl and Einar Keintzel</i>	207
3.5.1	Introduction	207
3.5.2	Behavior of materials	208
3.5.3	Behavior of structural elements	210
3.5.4	Behavior of structures	212
3.5.5	Design	213
3.5.6	Analysis and detailing of structures	214
3.5.7	Summary	217
3.5.8	Open questions and conclusions	218
3.5.9	Literature	220
3.6	Steel structures <i>Jack G. Bouwkamp</i>	224
3.6.1	Introduction	224
3.6.2	Moment resistant frames	225
3.6.3	Centrally braced systems	229
3.6.4	Eccentrically braced systems	233
3.6.5	Tall buildings	239
3.6.6	Composite structures	241
3.6.7	Hybrid structures	242
3.6.8	Conclusions	242
3.6.9	Open questions	243
3.6.10	Literature	243
3.7	Components and installations <i>Horst Wölfel and Manfred Schalk</i>	245
3.7.1	Summary	245
3.7.2	Principles	246
3.7.2.1	Definitions	246
3.7.2.2	Preconditions	246
3.7.2.3	Design concept	247
3.7.3	State of the art	248
3.7.3.1	Overview	248
3.7.3.2	Classification, objective of design	249
3.7.3.3	Design according to standards and specifications	250
3.7.3.4	Experience from earthquake damage	252
3.7.3.5	Experience from tests	252
3.7.3.6	Treatment in the literature	253
3.7.4	Open questions and conclusions	254
3.7.5	Literature	255

3.8	Isolation mechanisms <i>Gerhard Hirsch</i>	258
3.8.1	Introduction	258
3.8.2	Synopsis of the historical development	259
3.8.3	State of the art	261
3.8.4	Open questions and conclusions	264
3.8.5	Literature	265
3.9	Low-cost housing <i>Gisela Jürgens-Weicken</i>	267
3.9.1	Introduction	267
3.9.2	Construction types	268
3.9.3	Protection against earthquakes	269
3.9.4	Project of the DGEB working group	271
3.9.5	Open questions and conclusions	272
3.9.6	Summary	272
3.9.7	Literature	273
3.10	Retrofitting of buildings <i>Josef Eibl and Otto Henseleit</i>	274
3.10.1	Introduction	274
3.10.2	Design	274
3.10.3	Materials	276
3.10.3.1	Cast-in-place concrete	276
3.10.3.2	Shrinkage compensating concrete	277
3.10.3.3	Polymer modified concrete	277
3.10.3.4	Resin concrete	277
3.10.3.5	Shotcrete	277
3.10.3.6	Resins	279
3.10.3.7	Grouts	279
3.10.4	Steel structures	279
3.10.5	Concrete structures	279
3.10.5.1	Columns	280
3.10.5.2	Beams	281
3.10.5.3	Beam-column joint	282
3.10.5.4	Shear walls	282
3.10.5.5	Slabs	283
3.10.5.6	Infilled partition walls	284
3.10.5.7	Introduction of new structural elements	284
3.10.5.8	Foundations	285
3.10.6	Masonry structures	286
3.10.6.1	Introduction	286
3.10.6.2	Strengthening of masonry walls by confinement	286
3.10.6.3	Strengthening of masonry walls with steel sections	287

3.10.6.4	Strengthening of masonry walls with shotcrete	287
3.10.6.5	Strengthening of masonry walls by injection	288
3.10.6.6	Strengthening by horizontal diaphragms	288
3.10.7	Open questions	289
3.10.8	Literature	290
3.11	Standards <i>Hans-Joachim Dolling</i>	292
3.11.1	Introduction	292
3.11.2	Standards for usual buildings	294
3.11.3	Standards for special buildings	298
3.11.4	Open questions and conclusions	300
3.11.5	Literature	300
3.12	Post-earthquake studies <i>Martin Steinwachs</i>	302
3.12.1	Introduction	302
3.12.2	Post-earthquake studies before the UN-Decade	303
3.12.3	Example of a study after the 1985 earthquake in Mexico City	304
3.12.4	Open questions and research needs	308
3.12.5	Literature	309
3.13	Disaster preparedness <i>Rainer Härta and Gerhard Berz</i>	311
3.13.1	Preparedness programs	311
3.13.2	Preparedness agencies	312
3.13.3	Land-use planning	313
3.13.4	Insurance	313
3.13.5	Information, education, awareness developing	315
3.13.6	Earthquake prediction	316
3.13.7	Rehabilitation, reconstruction	317
3.13.8	Summary	318
3.13.9	Open questions and conclusions	318
3.13.10	Literature	319
3.14	Seminars and courses for training and education <i>Peter Bormann</i>	323
3.14.1	Importance of seminars during the IDNDR	323
3.14.2	Review of existing international institutions and courses in the field of seismology and earthquake engineering	325
3.14.2.1	Training activities organized by institutions and firms	326
3.14.2.2	Training activities organized or sponsored by international organizations	327

3.14.3	International training course on "Seismology and Seismic Hazard Evaluation"	328
3.14.3.1	History and concept of the course	328
3.14.3.2	Participants of the course	330
3.14.3.3	Scientific program of the course	332
3.14.3.4	Course materials	335
3.14.3.5	International response to the course	336
3.14.4	Summary, conclusions and recommendations	337
3.14.5	Literature	341
3.15	Reconstruction planning after earthquakes <i>Robert Geipel</i>	343
3.15.1	Introduction	343
3.15.2	Conclusions for the IDNDR	344
3.15.3	Open questions	349
3.15.4	Literature	349
4	Volcanoes <i>Hans-Ulrich Schmuncke, Boris Behnke, Jonathan Dehn, and Peter Ippach</i>	353
	Summary	353
	Introduction	354
4.1	Geography, morphology, and products of volcanoes	356
4.2	Kinds of dangerous volcanic activity	357
4.2.1	Magma-water interactions	359
4.2.2	Gas eruptions	360
4.2.3	Lava flows and domes	361
4.2.4	Tephra falls	362
4.2.5	Pyroclastic flows (glowing avalanches, surges)	363
4.2.6	Debris flows and mudflows (lahars)	366
4.2.7	Volcanic debris avalanches	366
4.2.8	Indirect effects	368
4.2.8.1	Tsunamis	368
4.2.8.2	Gas emissions and contaminated tephra falls	368
4.2.8.3	Impacts on climatic	369
4.3	Energy, magnitudes, and duration of explosive volcanic eruptions	371

4.4	Prediction of eruptions	372
4.4.1	Forecast and prediction	372
4.4.2	Eruptive history of volcanoes	374
4.4.3	Earthquakes	375
4.4.4	Expansion of magma chambers	376
4.4.5	Increasing temperature and gas emissions	376
4.5	Precautionary measures	376
4.5.1	Hazard maps	377
4.5.2	Monitoring	379
4.5.2.1	Remote sensing	379
4.5.2.2	Ground monitoring	379
4.5.3	Communication with authorities and public information	380
4.5.4	Mitigation of volcanic hazards	380
4.6	Recommendations of the International Association of Volcanology and Chemistry of the Earth's Interior (IAVCEI) for the IDNDR	381
4.6.1	Decade volcanoes	381
4.6.2	Communication and training	382
4.6.3	Crisis assistance	383
4.6.4	Publications	383
4.7	References	383
4.8	Case studies	388
4.8.1	El Chichón	388
4.8.2	Nevado del Ruiz	390
4.8.3	La Soufrière de la Guadeloupe	392
4.8.4	Heimaey	394
4.8.5	Una Una	396
4.8.6	Irazú	398
4.8.7	Cotopaxi	400
4.9	Scenarios	402
4.9.1	Vesuvius	402
4.9.2	Rabaul	404
4.10	Research projects	406

5	Mass Transports	409
	<i>Georg Mattheß and Birgit Rump-Schenk</i>	
	Preface	409
5.1	Definition and scope	411
5.2	Classification of mass transports	413
5.2.1	Petrography of displaced masses	413
5.2.2	Mechanisms of movements	414
5.2.3	Morphology of displaced masses	424
5.2.4	Special types of mass movements	425
5.3	Causes	426
5.4	Need of action	431
5.5	Procedures	435
5.5.1	Quantification and inventory	435
5.5.2	Diminution of damaging potential and effects	435
5.5.3	Associated sociogeographic studies	436
5.6	Literature	437
5.7	Appendices	447
	I. Causes of mass movements (after Varnes 1978)	448
	II. Scope of field investigations (Sowers and Royster 1978)	448
	III. Features for the recognition of common types of mass movements (Rib and Ta Liang 1978)	455
	IV. Key to land forms and their susceptibility to landslides (Rib and Ta Liang 1978)	461
	V. Nomenclature for the description of a displaced mass (IAEG Commission on Landslides 1990)	462
	VI. Concept for a data base of UNESCO Party on World Landslide Inventory (1990)	464
	VII. Summary of slope design procedure (Gedney and Weber 1978)	465

6	Floods and droughts	467
	<i>Hans-Bernhard Kleeberg (Ed.)</i>	
6.1	Floods	467
	<i>Heribert Nacken</i>	
6.1.1	Types and causes of flood disasters	469
6.1.1.1	Extreme climatic conditions	469
6.1.1.2	Dam breaks and failure of impoundment dams	470
6.1.1.3	Human impacts	
6.1.2	Disasters with groundwater and low flow	471
6.1.3	Methods for the quantification of the damage potential	473
6.1.4	Methods for the reduction of the damage potential	475
6.1.5	Steps for the prevention of disasters in water resources management	478
6.1.6	Management of disaster	479
6.1.7	Summary	481
6.1.8	Literature	485
6.2	Marine dangers	492
	<i>Jürgen Sundermann</i>	
6.2.1	Classification	492
6.2.2	Significance of dangers and measures of protection	493
6.2.3	Research needs	495
6.2.4	Literature	495
6.3	Droughts and famine	497
	<i>Hans-Georg Bohle, Jorg Gertel, Thomas Krings, and Fred Krüger</i>	
6.3.1	Starvation as a process	497
6.3.2	Definitions	497
6.3.3	Drought events and starvation	499
6.3.4	The role of geography	501
6.3.5	Research needs	502
6.3.6	Scope of research	505
6.3.7	Queries related to research	509
6.3.8	Summary	511
6.3.9	Literature	512
7	Storm and Precipitation	513
	<i>Rainer Roth, Gerd Tetzlaff, and Gerhard Berz</i>	
7.1	Introduction: types of catastrophes, amount of damage, research recommendations, and damage reduction	513
7.1.1	Overview	513

7.1.2	Amount of damage	513
7.1.3	Research recommendations and damage reduction	515
7.2	Storm events and climatic zones	517
7.2.1	Introduction	517
7.2.2	Types of storm events and regional distribution	518
7.2.2.1	Introduction	518
7.2.2.2	The baroclinic storms in the mid-latitudes	519
7.2.2.3	Tropical cyclones	522
7.2.2.4	Convectively spawned storm events and tornadoes	524
7.2.2.5	Orographic storms	525
7.3	Precipitation and climatic zones	525
7.3.1	Introduction	525
7.3.2	Precipitation in the mid-latitudes	526
7.3.3	Tropical precipitation	528
7.4	Synopsis of extreme events of storm and precipitation	528
7.5	Open questions	529
7.6	Literature	530
	Author's addresses	545
	Members of the DFG-Scientific Board for the German IDNDR National Committee	549
